City to Begin Street Chip Seal Improvements

BAINBRIDGE ISLAND, July 15, 2013 – City of Bainbridge Island contracted crews will soon begin work on island streets in preparation of roadway chip seal operations. It is anticipated that the work will begin late July and finish late August, weather permitting.

This maintenance work involves an application of emulsified asphalt followed by rock chips on the surface of the streets. There is no paving involved. The affected roads will remain open with one lane and flaggers. Within several days following the chip seal, the street surface will be resealed and swept to remove excess rock debris.

The streets receiving chip seal treatment this year include:

- County Park Road (from Sivertson to Grotle)
- Day Road West (from SR305 to Miller)
- Dolphin Drive (from Agatewood to Agate Point)
- Fletcher Bay Road (from New Brooklyn to High School)
- Grand Avenue (from Ferncliff to past Aaron)
- Halls Hill Road (from Blakely Hill to past Rockaway Bluff)
- High School Road (at Sportsman's Club)
- Komedal Road (from Seabold to Hidden Cove)
- Madison Avenue (from New Brooklyn to High School)
- Miller Road (from Day to New Brooklyn)
- New Brooklyn Road (from Madison to Sportsman's Club)
- North Madison Avenue (from Day to Winther)
- Seabold Road (from SR305 to Komedal)
- Sportsman's Club Road (from SR305 to New Brooklyn)
- West Port Madison Avenue (from SR305 to Sivertson)
- Wing Point Way (from Ferncliff to Wing Point Road)
- Baker Hill Road (from Blakely to Lynwood Center)
- Lynwood Center Road (from Baker Hill to Point White)
- Country Club Road (from Fort Ward to Toe Jam)
- Arrow Point Road (from Frey to past Venice)

To ensure a successful chip seal operation, drivers should watch for no-parking signs on both sides of the street prior to chip sealing. Once the road is chip sealed, slower driving speeds

(under 10 mph) are advised until the road is swept. Neighboring property residents should remember to keep pets indoors or fenced while work crews are in the vicinity. Driveway access may be temporarily disrupted during chip seal operations.
